

## REMARKS

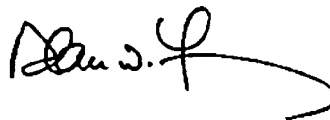

This Amendment is responsive to the Office Action mailed January 22, 2009.

According to the brief telephone interview of March 30, 2009 between Exr. Peng and the undersigned, the present amendment cancels the negative limitation “, the input multiplexer not including a tuner” that was previously added to claim 1 at the specific request of the Patent Office, by a predecessor Exr. in this case.

Exr. Peng, during the telephone interview of March 30, 2009, indicated that the present application is in condition for allowance, but for a possible provisional obviousness-type double patenting rejection that may be forthcoming in this application.

If any unresolved issues remain, please contact the undersigned attorney of record at the telephone number indicated below and whatever is necessary to resolve such issues will be done at once.

Respectfully submitted,

Date: March 31, 2009
